

Rainwater Tank Styles – What Types Are Best For You?

So you are interested in [buying a rainwater tank](#), but perhaps unsure what style of tank to go for? In this article we will take you through some things to consider to help you choose the right tank for your property.

Identifying Good Tank Locations

When buying a rainwater tank for your home, it is important that you first identify reasonable placement locations next to the main roof harvesting area. Take a walk around your house and look at where your downpipes are located.

Rainwater tanks do not need to be placed flush up against external house wall, but can have piping that extends out from your gutter downpipe or even buried underground. So if you have a path that goes around the side of your house, then your tank could be placed on the outer side of the path.

Corrugated water tanks look quite the part in a garden and come in a variety of colours. If you do not have a fence providing privacy from your neighbours, you could even setup rainwater tanks in a way that provides more privacy in the right area.

Having thought through some locations to tank placement, you are ready to decide upon your style of tank/s.

Property Size and Space

You will obviously need to be realistic when selecting a tank which can fit on your property. Planning and preparation is key to ensure your tank will not be positioned in an awkward spot.

If your property is quite large, then you likely wouldn't have any problem fitting in a [large round tank](#). On the other hand, you might be able to fit a [slimline tank](#) or two along the side of your house. Keep in mind that they can also create some privacy near your property line if you have limited fencing. Other options for poly tanks include shallow excavation [underground tanks](#).

Water Tank Range at Clark Tanks

If you are not quite sure what would be appropriate, then our friendly staff would be happy to provide advice. Clark Tanks range of [poly water tanks](#) is quite diverse.

Round Corrugated Tanks

Our [round water tanks](#) are designed with a special ribbed profile for maximum integral strength to ensure the shape of your tank remains the same. Our stylish corrugated round tanks come in two size categories:

- [Small Round Tanks](#) (1,000 to 9,500 litres)
- [Large Round Tanks](#) (10,000L to 46,800 litres)

Slimline Water Tanks

Our [slimline tank models](#) are designed for strength, space and cost efficiency. Combining visual appeal with industry-leading integral strength, Clark Tanks' slimline range are designed to suit limited space applications. Slimline tank capacities are available from 2,000 to 5,000 litres.

Underground Water Tanks

Our [Li-Lo Underground Tanks](#) are one of the most compact and shallow excavation underground tanks on the market. They are available in capacities of 5,000, 3,000 and 1,600 litres.

Based upon latest German engineering, we manufacture them in our modern manufacturing facilities in Australia. Benefits include:

- compact shallow excavation design
- no ballasting required
- fully integrated self-cleaning filter
